

# Developing with ASP.NET on Mac OS X

Dude...

It's OS "Ten" not "X"

# ASP.NET 5

The only thing that's changed is everything.

Significant Redesign

# Open Source

[github.com/aspnet/home](https://github.com/aspnet/home)

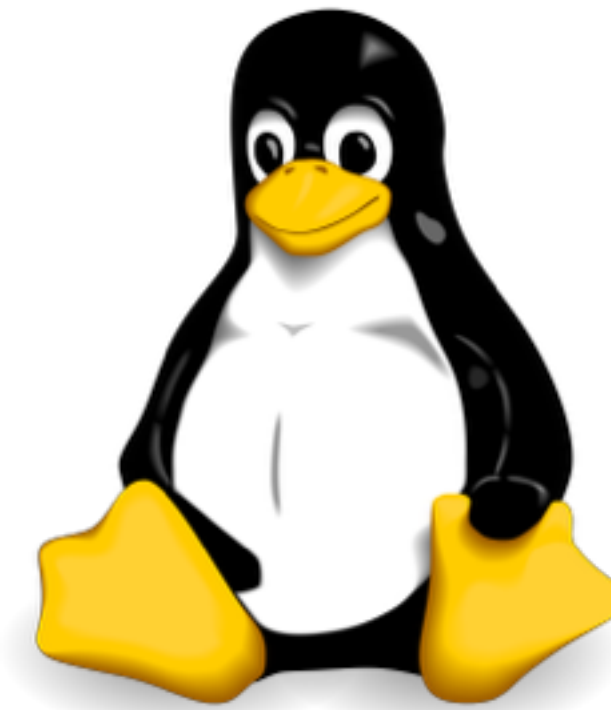

~~System.Web.dll~~

Beta... or Alpha?

# Cross Platform

# Environment Setup

- Xcode (various command line tools)
- Homebrew
- Git
- Node.js
- Mono
- Yeoman
- ASP.NET 5 Yeoman Templates

- Visual Studio Code
- Atom (and OmniSharp package)
- sqlitebrowser (database browser)
- Chrome (for the dev tools)
- Setup ~/.bash\_profile
- Downloaded my presentation materials (via GitHub repo)
- TextExpander (for code snippets)

DNVIM, DNX, & DNU

# DNVM

.NET Version Manager

# DNX

.NET Execution Framework

# DNU

.NET Development Utility

OS X Installer

Demos

What is Missing?

# ASP.NET Community Standups

[live.asp.net](https://live.asp.net)

# ASP.NET Documentation

[docs.asp.net](https://docs.asp.net)

Questions?

# Thanks!
